Weber®
Packaging Solutions

An overview of one of the world's foremost providers of labels, labeling systems and ink jet coding.

Weber Mission Statement

Our Success comes from helping our customers grow.
Our Commitment is to bring technologies to market that improve packaging automation, product identification and brand recognition.
Our Team is agile, creative, responsive and conscientious toward our customers, our community and our environment.

About Weber

Weber Packaging Solutions is a leading innovator in the design, engineering, manufacture and supply of high-performance pressure-sensitive labels, labeling systems, and continuous ink jet systems.

Originally founded in 1932 as Weber Addressing Machine Company, we have grown along with the ever-changing technology of labeling to become an international leader in producing labeling solutions we never could have imagined over eighty years ago.

Now, from our world headquarters and manufacturing facility near Chicago, we provide labeling products, systems and services for over fifty thousand companies. Weber labeling solutions can be found in every industry, from the smallest manufacturer to the largest Fortune 500 operation.

Additional Weber manufacturing, sales and service facilities are located in Canada, Mexico, Australia, Europe, United Kingdom and Asia.

Weber Manufacturing

Weber Packaging Solutions manufactures a very broad line of labels and tags at our 320,000-square-foot manufacturing plant.

All operations are accomplished in our facility, including label graphic design and printing plate preparation, coating mill rolls with pressure-sensitive adhesive, and slitting those rolls to individual customer specifications.

With over thirty-five flexographic and digital label presses under one roof, we are able select the most productive printing technology for a particular order. These high-speed presses print labels in up to ten colors, including life-like four-color process.

Weber also offers over one hundred combinations of paper and film label stocks partnered with numerous adhesives to create labels that can be perfectly matched to a specific application.

In addition, Weber designs, fabricates and assembles a wide selection of standard and customized label applicators and printer-applicators. These systems feature high-speed, precise label placement along with unsurpassed label print quality. Weber's latest innovation is a linerfree labeling system.

We are proud of our manufacturing plant and its capabilities. Site tours can be arranged through your Weber account manager.

ISO 9001 REGISTERED 2008

ESKO HD FLEXO CERTIFIED

GRAPHIC MEASURES INTERNATIONAL gmi CERTIFIED PRINT FACILITY

Gold Ink 2014 Awards

Weber Packaging Solutions provides the highest quality labels and labeling systems. Our philosophy emphasizes continuous improvement and defect prevention, and our products and processes are certified to meet the stringent requirements of the international ISO9001 quality standards.

Weber Quality

Our Quality Assurance team consists of experienced technicians who inspect all raw materials, work in progress, and completed label orders to ensure every product we deliver meets our standards and the requirements of the customer.

Customer questions and comments are always welcome, and we conduct an annual customer satisfaction survey to assess our performance and to identify opportunities for improvement.

Weber® Greenwise

Weber Packaging Solutions' own Greenwise Program is an effort to challenge professionals in the packaging industry to become more observant, knowledgeable and committed towards greater environmental stewardship.

Weber Environmental Stewardship

To that end, we offer a number of sustainable label products, including renewable films and papers, 30 percent post consumer waste papers, dissolvable and repulpable papers, soy-based inks, linerfree labeling systems and more.

Weber also has implemented green initiatives like recycling press waste into fuel pellets, eradicating the use of catalyzed inks, eliminating the use of herbicides on our grounds, new lighting that reduces airborne pollutants, in addition to taking other measures.

We believe that what is good for business can be better for the environment. We do not believe that being green has to cost more; no packaging professional should accept that. Here at Weber, we pledge to strive to develop products and process that improve our environment and our bottom line.
